

3 ways to create your transfers

Sublimation Printer

Use the Sublimation Printer to create transfers for mugs, clocks, mousemats, coasters, metal, awards and plaques plus many other products.

Laser Printer

Use the Laser Printer to create full colour transfers for light or dark t-shirts.

Cutter / Plotter

Use the Cutter in conjunction with Flex or Flock material to cut our logos, text or numbers and also to cut around laser printed transfers.

Once transfers are made this way, simply heat press the transfers onto your products using our Flat Heat Press, Mug Press, Cap Press or Plate Press - It's that simple and it takes just seconds to create stunning gift items and personalised products!
